

BEFORE

Modern technology has paved the way for multi-functional devices like the smartwatch and the smartphone. Computers are increasingly faster, more portable, and higher-powered than ever before. With all of these revolutions, technology has also **made our lives easier, faster, better, and more fun**

Technology has made it easier to farm, more feasible to build cities, and more convenient to travel. Virtually every facet of human life can be carried out in an easier, more effective, and quicker fashion via the use of new technology. It has also effectively linked together all countries on earth, helping to create globalization.

Because of technology **it's now easier to go to work or perform household chores**. There are various gadgets and equipment that help people live their lives more conveniently. It has also influenced various fields in today's society, such as transportation, education, and medicine.

Current digital systems such as computers, smartphones, tablets and laptops have evolved over time. **The typewriter was replaced by digital systems such as a computer and word processing software**. Telephones have evolved over time into versions that are portable such as mobile phones and, more recently, smartphones

AFTER

Life without technology **wouldn't be functional or enjoyable for most of us**. Keep the world running by getting into IT. Imagine this: You wake up one day in a world without technology – all the computers on the planet just disappeared. First of all, you'd wake up late because your smartphone alarm no longer exists

Played cards, board games, socialized, danced, sang, attended social events (church), went to plays, argued politics, played instruments, read, hunted, fished, played sports, went riding, hiking, walking, shagged, fought, drank alcohol (or did other drugs).

Long before the technology people had to use a tool called a pen and other equipment to actually write messages to one another. The finished message would need to be enclosed in more paper that called envelope, postage needed to be paid and then the delivery raider will sent to the sender.

Technology in the past was meant to simply help society with problems, such as creating the lightbulb in place of candlelight. Nowadays, technology has strayed from simply being helpful, and has become something that we, the creators, are unable to fully explain or control. It has far surpassed its original goals of shining a light on a dark room.
